Oracle JDeveloper 10.1.3.3 on Kubuntu 8.04

Frank Engel · Monday, June 9th, 2008

Download here:

<http://www.oracle.com/technology/software/products/jdev/htdocs/soft10133.html>

Follow the instructions.

Edit /jdev/bin/jdev.conf

1. SetJavaHome
2. disable SetJavaVM hotspot #

```
# Directive SetJavaHome is not required by default, except for the base
# install, since the launcher will determine the JAVA_HOME. On Windows
# it looks in ..\..jdk, on UNIX it looks in the PATH by default.
```

```
#
```

```
SetJavaHome /opt/java/jdk1.5.0_15
```

```
#
```

```
# The Windows launcher will attempt to use client (hotspot) by default,
# unless a VM is specified below with the following directive. On UNIX
# we use whatever is listed first in the $(JAVA_HOME)/jre/lib/jvm.cfg file.
```

```
#
```

```
#SetJavaVM hotspot
```
